DETI's needs that could be the basis of some projects

- From the presentation of 15th February
  - DETI has specific needs to improve teaching conditions, accessibility, organization, etc.
  - These needs could be the basis of a company (class), or one project within the portfolio of a company

- Some examples of DETI's wish list
  - Intelligent light system for DETI Maker Lab
  - Presence detection system for automatic activation / de-activation of information displays

Some Notes

- Previous examples of DETI's needs could integrate the portfolio of the "emulated company" in PEE.

- Previous exemples are still at the level of wishes.
  - Initial work in the project would be the definition (together with the customer, i.e. DETI) of the precise requirements for the system(s) to be developed
